

VERALLIA BORDEAUX ECOVA

ECOVA - ECO for ecological and VA for value. These bottles enjoy all the ecological advantages of glass – a neutral and inert material that is 100% continuously recyclable. Beyond that, however, they also offer a response to environmental concerns: reducing the overall impact on the environment and enhancing the product image with an eco-responsible approach.

- Each ECOVA wine bottle is made with an average of over 50% recycled glass.
- For every 10% recycled glass used results in 3% energy saved and 5% less CO2 emitted during production!
- Each ECOVA bottle is designed and manufactured with strength and durability in mind.
- All elements of the bottle – side-wall thickness, heel and shoulder – are designed to meet the highest industry standards.

Comparing the ECOVA Bordeaux bottle to a normal 20 oz. wine bottle:

- Reduces consumption of energy for manufacturing and CO2 emissions by 29%
- Reduces greenhouse gases and the impact on transportation by 19%
